Bloomington, MN 55437

A. Purpose and Need

The purpose of this proposed timber harvest is to produce maximum quality and quantity of forest products grown under sustained-yield management principles, while maintaining the diversity of native species as stated under the Menominee Forest Management Plan. The need for this proposed action is to promote general forest health, produce revenue for Menominee Tribal Enterprises (MTE) and provide local employment.

Proposed Action and Alternatives

Proposed Action: Menominee Tribal Enterprises is proposing to conduct harvest on approximately 3,081 acres across the Menominee Indian Tribe of Wisconsin's forest lands, located in northeast Wisconsin (Figure 1). Table 1 has a summary of the proposed harvests, and their location within the Menominee Compartment system.

Prescription Number	Harvest season	Compartment	Treatment Type	Acres
124-22-11-01	Fall/Winter	124	Pine Release	27
210-22-06-01	Fall/Winter	210	Intermediate Thin	18
312-22-01-01	Fall/Winter	312	Single Tree Selection and/or Group Selection	678
337-22-01-02	Fall/Winter	337	Single Tree Selection and/or Group Selection	1,330
999-22-02-01	Spring/Summer	Various	Even-age Basal Area Thin (Plantation)	481
999-22-05-01	Spring/Summer	Various	White Pine Shelterwood	192
999-22-09-01	Spring/Summer	Various	Clear-cut Natural Regeneration	355
			Total Acres	3,081

There are six different treatment types proposed across the 3,345 acres. Table 2 indicates the number of acres by treatment type in descending order of acres to be treated.

Treatment Type	Silvicultural System	Acres
Single Tree Selection and/or Group Selection	Uneven-Aged	2,008
Even-age Basal Area Thin (Plantation)	Even-Aged	481
Clear-cut Natural Regeneration	Even-Aged	355
White Pine Shelterwood	Even-Aged	192
Pine Release	Even-Aged	27
Intermediate Thin	Even-Aged	18
Total Acres		3,081

A summary each of the six treatments is below:

- Uneven-age Single Tree or Group Selection: Harvesting sawtimber, maintain growth and vigor of released trees, regenerating trees via canopy gaps.
- Clear-cut Natural Regeneration: Harvesting all trees in an area, with an expectation that it regenerates to the same general stand composition.
- Even-Age Basal Area Thin (Plantation): Harvesting enough undesirable trees from a stand to meet a retention basal area, while leaving the residual trees relatively evenly spaced or releasing specific crop trees.
- Pine Release: Harvesting most hardwoods and leaving most pine trees to keep stand as a pine stand.
- White Pine Shelterwood System: A series of treatments which may include: a preparation harvest, an overstory harvest, a final removal harvest, planting, weeding, and competition control.
- Intermediate Thin: Harvesting suppressed, poor condition, or non-objective species trees to maintain the growth and vigor of the remaining trees.

Specific portions of treatments:

- Appendix A includes stand by stand specifics for each treatment, including the location of those stands.
- In all treatments fresh cut pine stumps are treated with Sporax or Cell-u-Treat during the non-winter months. Those trees must be removed from the site within 2 weeks of cutting.
- Some areas within the white pine shelterwood prescription do not meet the existing conditions for a shelterwood, so the parts of those stands will be converted to an uneven-aged hemlock and hardwood stand type after this entry. However, the tree types to be removed in this entry will be the same throughout.
- Prescribed fire will be part of some prescriptions to reduce competition, prepare a seedbed for regeneration, or maintain an open condition within the stand.
- Spring and Summer treatments generally start May 1st.
- Fall and Winter treatments generally start September 1st or August 1st depending on equipment.

No Action Alternative: No timber harvest or other management actions are proposed under the No Action alternative for this project. The proposed treatments will not take place, however other forms of forest management will continue, under other NEPA documentation.

B. Effects to the human environment

i. Water Resources:

Action Alternative:

Direct, Indirect and Cumulative Effects: Potential effects will be mitigated by the measures indicated in Appendix A for each prescription. Appendix A states that:

- Harvesting equipment operation must not take place on grades greater than 15%, in order to control erosion. If this is unavoidable and the ground leaf layer is disturbed, proper structures must be constructed to minimize runoff and erosion.
- All BMP's and Menominee Indian Tribe of Wisconsin E-code: Chapter 340-20 Limitations on tribal logging practices are to be followed.
- Stream crossings will only be allowed on existing roads with approved crossings.
- Use current State of Wisconsin BMPs for water quality as a guide. Follow Menominee Indian Tribe of Wisconsin E-code: Chapter 340-20 Limitations on tribal logging practices. Do not operate wheeled or tracked harvesting equipment within 50 feet of wetlands or waterways except on roads or at stream crossings, or if the ground is dry or frozen.
- Avoid felling any timber into wetlands. If trees must be felled in such a manner, remove tops or slash from wetlands. Harvest equipment operating in areas of wetlands can occur where approved by the officer in charge if the area is dry or frozen. An example would be seasonally appropriate crossings of wetlands in order to harvest trees on drier islands of timber inside of the wetland.”

No Action Alternative:

Direct, Indirect and Cumulative Effects: No effects are anticipated as a result of the No Action alternative.

ii. Living Resources:

Forest Ecosystem

Action Alternative:

Direct Effects: At the stand and compartment level the effects of timber harvest will be temporary and short-term. Even-aged treatments covering 1,073 acres includes 355 acres of clearcut harvest that will naturally regenerate. The other 718 acres are intermediate treatment and not regeneration harvests. They will keep mature tree cover until the regeneration harvest in the future. All 2,008 acres of un-even aged treatments will temporarily reduce the overstory coverage, but the stands will generally remain the same, with similar tree ages, structure and classes, as well as shrub and forb vegetation layers.

Indirect and Cumulative Effects: The management of 3,081 acres of forested stands will have a negligible effect on the overall forest ecosystem due to the scale of the Menomonie forestlands and the relative lack of harvest intensity across much of that landscape. This type of forest management is typical across the Lake States and this is not a disproportionate amount of area to treat on the Menominee Forest in a year.

No Action Alternative:

Direct, Indirect and Cumulative Effects: No effects are anticipated as a result of the No Action alternative.

Threatened and Endangered Species

Table 1: Threatened and Endangered Species in Menominee County, Wisconsin

Species	Status	Habitat
Gray wolf <i>Canis lupus</i>	Endangered	Northern forested areas
Northern long-eared bat <i>Myotis septentrionalis</i>	Threatened	Hibernates in caves and mines - swarming in surrounding wooded areas in autumn. During summer, roosts and forages in upland forests.
Karner blue butterfly <i>Lycæides melissa samuelis</i>	Endangered	Prairie, oak savanna, and jack pine areas with wild lupine

<http://www.fws.gov/midwest/endangered/lists/wisc-cty.html>

Action Alternative:

Direct, Indirect and Cumulative Effects:

Gray wolf: There are no known denning sites in the project area and this limited proposed harvest is expected to have negligible effect on gray wolves due to their broad range, and the negligible effect that this harvest would have on the forest ecosystem.

Northern long-eared bat: No direct, indirect, or cumulative effects to the northern long-eared bat population are anticipated as a result of the proposed harvest, as there are no known populations on Menominee Reservation forestlands. Additionally, there are no known hibernacula, no known roost trees on Menominee Reservation forestlands. This meets or exceeds the US Fish and Wildlife Service's mitigation measures for avoiding harvest activities within a 150 foot radius of known roost trees between June 1 and July 31 which is pup season; as well as avoiding year-round harvest activities within ¼ miles of known hibernacula.

Karner blue butterfly: No effects to Karner blue butterflies or their habitat are anticipated due to their habitat being prairie, oak savanna, or jack pine areas with wild lupine. This alternative does not propose harvest in those habitats.

No Action Alternative:

Direct, Indirect and Cumulative Effects: No effects to the listed species are anticipated as a result of the No Action alternative.

iii. Cultural Resources:

Action:

Direct, Indirect and Cumulative Effects: No effects are anticipated. The Section 106 consultation process has been completed, and cultural resource sites will be avoided during the project. If any cultural resources sites are found during treatment preparation or harvest they will be protected under Menominee Tribal Ordinance 5-22 and the National Historic Preservation Act and Archaeological Resources Protection Act. Please see appendix A for Section 106 documents.

No Action Alternative:

Direct, Indirect and Cumulative Effects: No effects will occur.

iv. Socioeconomic Conditions:

The socioeconomic status in Menominee County, Wisconsin is below average relative to the rest of the State of Wisconsin. The monthly, not seasonally adjusted unemployment rate as of December 2020 for Menominee County is 4.3.0%, which is almost double of the state of Wisconsin's rate of

2.0%. (<https://research.stlouisfed.org/fred2/series/WIMENO8URN>, <https://research.stlouisfed.org/fred2/series/WIURN>).

Per capita personal income in 2020 was just over half of the average in Wisconsin at \$35,082 compared to \$55,593 (<https://fred.stlouisfed.org/series/PCPI55078>, <https://fred.stlouisfed.org/series/WIPCPI>). In 2019, 35.3 % of Menominee County residents were below poverty level compared to 10.0% state-wide in 2019 (<https://fred.stlouisfed.org/series/S1701ACS055078>, <https://www.census.gov/quickfacts/fact/table/wi/PST045217>). No other county in Wisconsin was below 20% in 2019 (<https://fred.stlouisfed.org/release/tables?rid=416&eid=342620#snid=342660>).

Action Alternative:

Direct, Indirect, and Cumulative Effects: The proposed harvest will provide revenue for Menominee Tribal Enterprises; and employment for members of the Menominee Indian Tribe of Wisconsin and other local residents during the harvesting and processing of the forest products. The overall direct, indirect and cumulative effects as a result of the proposed harvest for socioeconomics are expected to be a minor positive benefit.

No Action Alternative:

Direct, Indirect, and Cumulative Effects: No additional harvest and wood processing revenue and employment would occur because of this alternative. This would be a negative impact to the Tribe and surrounding communities, as logging and forest products processing in a major employer in the area. No benefit to local residents or the Tribe will occur. No changes to direct, indirect, or cumulative effects are anticipated because of this alternative from the current condition.

v. Other resources:

Action Alternative:

Mitigation measures identified in Appendix A minimize the potential adverse effects to land resources. Negligible direct, indirect, and cumulative effects to water resources are expected with mitigation measures in place.

No effects will occur to other resources are anticipated under the action alternative.

No action Alternative:

No effects to other resources are anticipated as a result of this alternative.

C. Mitigation Measures to Reduce Potential Adverse Effects:

See Appendix A for all mitigation measures required to implement this harvest.

D. Consultation and Coordination

Section 106 of the National Historic Preservation Act:

Consultation took place with Tribal Historic Preservation Office and BIA Midwest Region Staff. Consultation consistent with Section 106 of the National Historic Preservation Act has been completed and cultural resource sites will be avoided during the project. If any cultural resources sites are found during treatment preparation or harvest, they will be protected under Menominee Indian Tribe of Wisconsin E-code: Chapter 340-20 and the National Historic Preservation Act and Archaeological Resources Protection Act. Please see appendix A for Section 106 documents.

Section 7 of the Endangered Species Act:

Consistent with Section 7 of the Endangered Species Act, given the no effects determination was made for all known or suspected Threatened and Endangered species as a result of the project and proposed mitigation measures, no consultation with the US Fish

and Wildlife Service was necessary. Any additional information found during preparation or harvest, including confirmation of maternity roost trees or hibernaculum for Northern Long-eared bats will be used to re-evaluate the determination before proceeding.

Updates to the Threatened and Endangered species list for Menominee County can be found at: <http://www.fws.gov/midwest/endangered/lists/wisc-cty.html>
